|                             |                                                        |                        |                     |                                                                                    |                                               |                                                                                                      |                                                 | Prefers consistent and regular<br>moisture in well-drained acidic,<br>loamy, organically-enriched soils in<br>full sun to partial shade. It tolerates<br>pollution and needs a protected site<br>from late frosts. Plant late-flowering<br>cultivars to avoid severe frost<br>damage. Best to plant in protected<br>location against frost and strong<br>winds, but avoid southern exposures<br>near structures, as buds may be<br>encouraged to open too early. It<br>makes a great specimen tree, a lawn<br>tree, patio tree, or planted in a park<br>or recreation area. This pant has pest<br>and disease problems.<br>This tree is mildly resistant to |  |
